Ahmet ALMAZ

Full Stack Developer

me@ahmetalmaz.com Türkiye https://ahmetalmaz.com Music47ell Music47ell

Summary

Backend-focused Full-Stack Developer skilled in building scalable, production-ready systems with Node.js/Bun, Redis, and SQL. Leveraging AI-assisted development to accelerate debugging, resolve issues efficiently, and improve overall engineering velocity.

Experienced in API design, real-time services, custom analytics platforms, and managing infrastructure with CI/CD pipelines on self-hosted servers. Fluent in English and Arabic with strong collaboration skills.

Experience

ARER KONTROL ROBOTİK Türkiye
Student Intern Aug 2024 - Aug 2024

Enkur Enerji Türkiye
Full Stack Developer May 2024 - Jul 2024

Enkur Enerji Türkiye
Student Intern Feb 2024- Apr 2024

Education

Kahramanmaraş Sütçü İmam University
Computer Engineering

Projects

Self-Hosted Content & Deployment Platform
Astro, Headless WordPress, Docker, GitHub Actions, Redis, Debian VPS

- Architected a decoupled CMS with Redis caching, separating content management from frontend to improve performance and reduce server load.
- Built containerized deployments with Docker and automated CI/CD via GitHub Actions, managing production infrastructure on Debian (reverse proxy, networking, container orchestration).
- Configured self-hosted notifications using ntfy for real-time pipeline visibility.

https://github.com/Music47ell/ahmetalmaz

Unified Activity Dashboard API
Bun, Hono, TypeScript, Cloudflare Workers, Turso

- Architected a serverless personal data aggregation API on Cloudflare Workers, integrating 10+ external services (ListenBrainz, Simkl, Goodreads, CodeStats, MonkeyType, TMDB, Deezer, Last.fm).
- Designed a TTL-based caching system using libSQL to minimize external API calls, with sub-millisecond response times for read-heavy dashboard queries.
- Engineered modular service integrations with error handling and response types, for easy addition or replacement of data sources.

Healthcare Appointment System
Astro, Supabase, Cloudflare Workers, Tailwind CSS, Bun, PostgreSQL (RLS)

- Designed a multi-role healthcare appointment system with Astro SSR and Supabase, separating patient/doctor/admin dashboards behind row-level security to enforce data isolation.
- Built serverless deployment on Cloudflare Workers, automated auth session management via Supabase, handling appointment CRUD, role-based registration, and admin approval workflows.
- Injected runtime environment variables across all API endpoints via Cloudflare Workers middleware layer, eliminating build-vs-runtime configuration conflicts.

Arneca - Multilingual Headless CMS Platform
Arabic Localization, RTL Support & SEO Automation

- Arabic i18n + RTL: Added complete Arabic locale, RTL styles, locale routing, and IBM Plex Sans Arabic fonts.

- AI translation pipeline: Built a Gemini-based translate API with one-click translation buttons in Payload CMS.

- Translation sync tooling: Extend sync/validate scripts to cover en/de/ar and fail builds on missing keys.

- SEO automation: Regenerated sitemaps for all locales, prerendering and SEO component updates.

- Pages: Updated all pages/sections for new locales and RTL.

Job Portal
Astro, Supabase, Cloudflare Workers, Tailwind CSS, Bun, PostgreSQL (RLS)

- Designed a multi-role job marketplace with Astro SSR and Supabase, separating seeker/owner/admin dashboards behind row-level security to enforce data isolation.
- Deployed serverless app on Cloudflare Workers with Supabase auth, role-based job CRUD, registration, and admin approval workflows.
- Architected a serverless middleware layer with Cloudflare Workers for secure runtime environment binding injection across all API endpoints.

Volunteering

Translation 2018 - Present
Remote
I enjoy translating free and open source projects in my free time. For example:

- Box Box
- Cryptomator
- QUIK
- Pano Scrobbler
- Tunnelblick

And much more.

Languages

Arabic
Native

English
Bilingual

Turkish
Limited

Skills

Front End

Javascript/ES6+, TypeScript, React.js, Vue.js, HTML5, CSS

Back End

Node.js, Python, PHP, Hono

Databases

Turso (libSQL / SQLite), MySQL, PostgreSQL, Redis, Database schema design

Framework

Next.js, Nuxt.js, Tailwind CSS, Astro, Express.js

DevOps & Infrastructure

Git (GitHub, GitLab, Bitbucket), DNS Managment, API, SEO, Docker, CI/CD (GitHub Actions), Linux, VPS management, Reverse proxy (Caddy / NGINX / Apache / Traefik)

Certifications

Relational Database Oct 2024
freeCodeCamp

Back End Development and APIs May 2022
freeCodeCamp

Data Visualization May 2022
freeCodeCamp

JavaScript Algorithms and Data Structures May 2022
freeCodeCamp

Front End Development Libraries Nov 2021
freeCodeCamp
